Hello Rich,

Due to time constraints, I wasn't able to ask my question during today's conference call. Is it possible to get the following answered by the end of the day? I'd like to know the distance of the plume from Glen Canyon National Recreation Area and Lake Powell and get a comment from the EPA about whether it recommends recreationists at the lake take any precautions in terms of swimming, drinking and recreating in some/all parts of the lake.

Thanks so much,

Emery Cowan

David Gray, New Mexico, gray.david@epa.gov

Kelly Zito, San Francisco, zito.kelly@epa.gov

COLORADO, DALLAS, SAN FRANCISCO – (August 9, 2015) EPA is providing daily updates for members of the media via conference call. In order to provide better service and audio quality, we will use our operator assisted conferencing service.

WHO: EPA Officials from Denver, Dallas and San Francisco (varies by date)

WHEN: August 10, 3 PM (Mountain, MT)

WHERE: Conference Dial-in Number: Nonresponsive Conference Code

Conference Identification: Nonresponsive Conference Code Gold King Mine Release – EPA Media Update

On Aug. 5 while investigating Gold King Mine in Colorado, EPA and State Division of Reclamation Mining and Safety triggered a large release of mine wastewater into Cement Creek. EPA is working closely with first responders and local and state officials to monitor water contaminated by the spill. The spill path flows through 3 of EPA's regions (Region 8 (Colorado/Utah & Southern Ute Tribe); Region 6 (New Mexico), and Region 9 (Navajo Nation). EPA has activated its Emergency Operations System to ensure coordinate on among its regions, laboratories and national program offices in Washington DC. EPA is closely coordinating with the officials in Colorado, New Mexico, Utah, Southern Ute Tribe and Navajo Nation.

Subject: Gold King Mine wastewater and Lake Powell

Hello Rich,

I am a reporter with the Arizona Daily Sun and I'm working on an update about the movement of Gold King Mine wastewater toward Lake Powell and Glen Canyon National Recreation Area. Can you provide information about where the leading edge of the plume has reached and the speed at which it is moving? I also read that the EPA is releasing a more comprehensive analysis of the contaminated wastewater, its danger to humans and animals and how it is being diluted as it moves downstream. When will that be released? Lastly, can the EPA comment on the precautions issued by Glen Canyon National Recreation

Area urging visitors not to drink, swim or recreate on the San Juan River near the recreation area and Lake Powell? My deadline is tonight.

Thanks so much,

Emery Cowan
